

The background of the slide is a dark, high-contrast photograph of the front of a car, likely an Opel, with its headlights illuminated. The car is centered and occupies most of the frame. The Opel logo is visible on the front grille.

General Motors / Opel

How OnStar and Vehicle Connectivity Shape the Future of Transportation

PSCE conference

Athens, Greece
23 November, 2016

General Motors – a history of envisioning future transportation

1964

1964 Futurama II - the "City of Tomorrow" would eliminate all traffic problems

- Urban living centers above advanced freeways
- Computer-guided vehicles would travel swiftly & safely
- Moving walkways would carry pedestrians to shopping areas and other attractions.

GM / Motorama Exhibition,
1956

The Challenge: It is a complex world

Technology
Vehicle / Sensors
/Algorithms

Business Model

Completely novel ideas for Safeguarding processes and Business Models required.

Society

How many accidents have to be prevented, before one machine-caused accident is accepted?

Nobody lives in „Globalia“ ...

Example: Demography

Aging Population in mature markets such as Europe, U.S., Japan, and even some emerging markets such as China or South-East Asia

Young, dynamic population in India, Africa, and middle east and parts of USA

Nobody lives in „Globalia“ ...

Example: Connectivity

High penetration with smartphone & „fixed-line“ infrastructure in EU and Asia. Expensive old infrastructure needs to be utilized

Mobile, open-platform internet concepts replace non-existing, conventional infrastructure in Africa and parts of Asia

Inventions that changed the world ...

Invention	Date of Invention	Number of years to reach 25% of households
Air plane	1903	64
Auto	1886	55
Electricity	1873	46
Telephone	1876	35
VCR	1952	34
Microwave oven	1953	30
TV	1926	26
Radio	1906	22
PC	1975	16
Mobile phone	1983	13
Internet	1991	7
Smart Phone*	2007	3

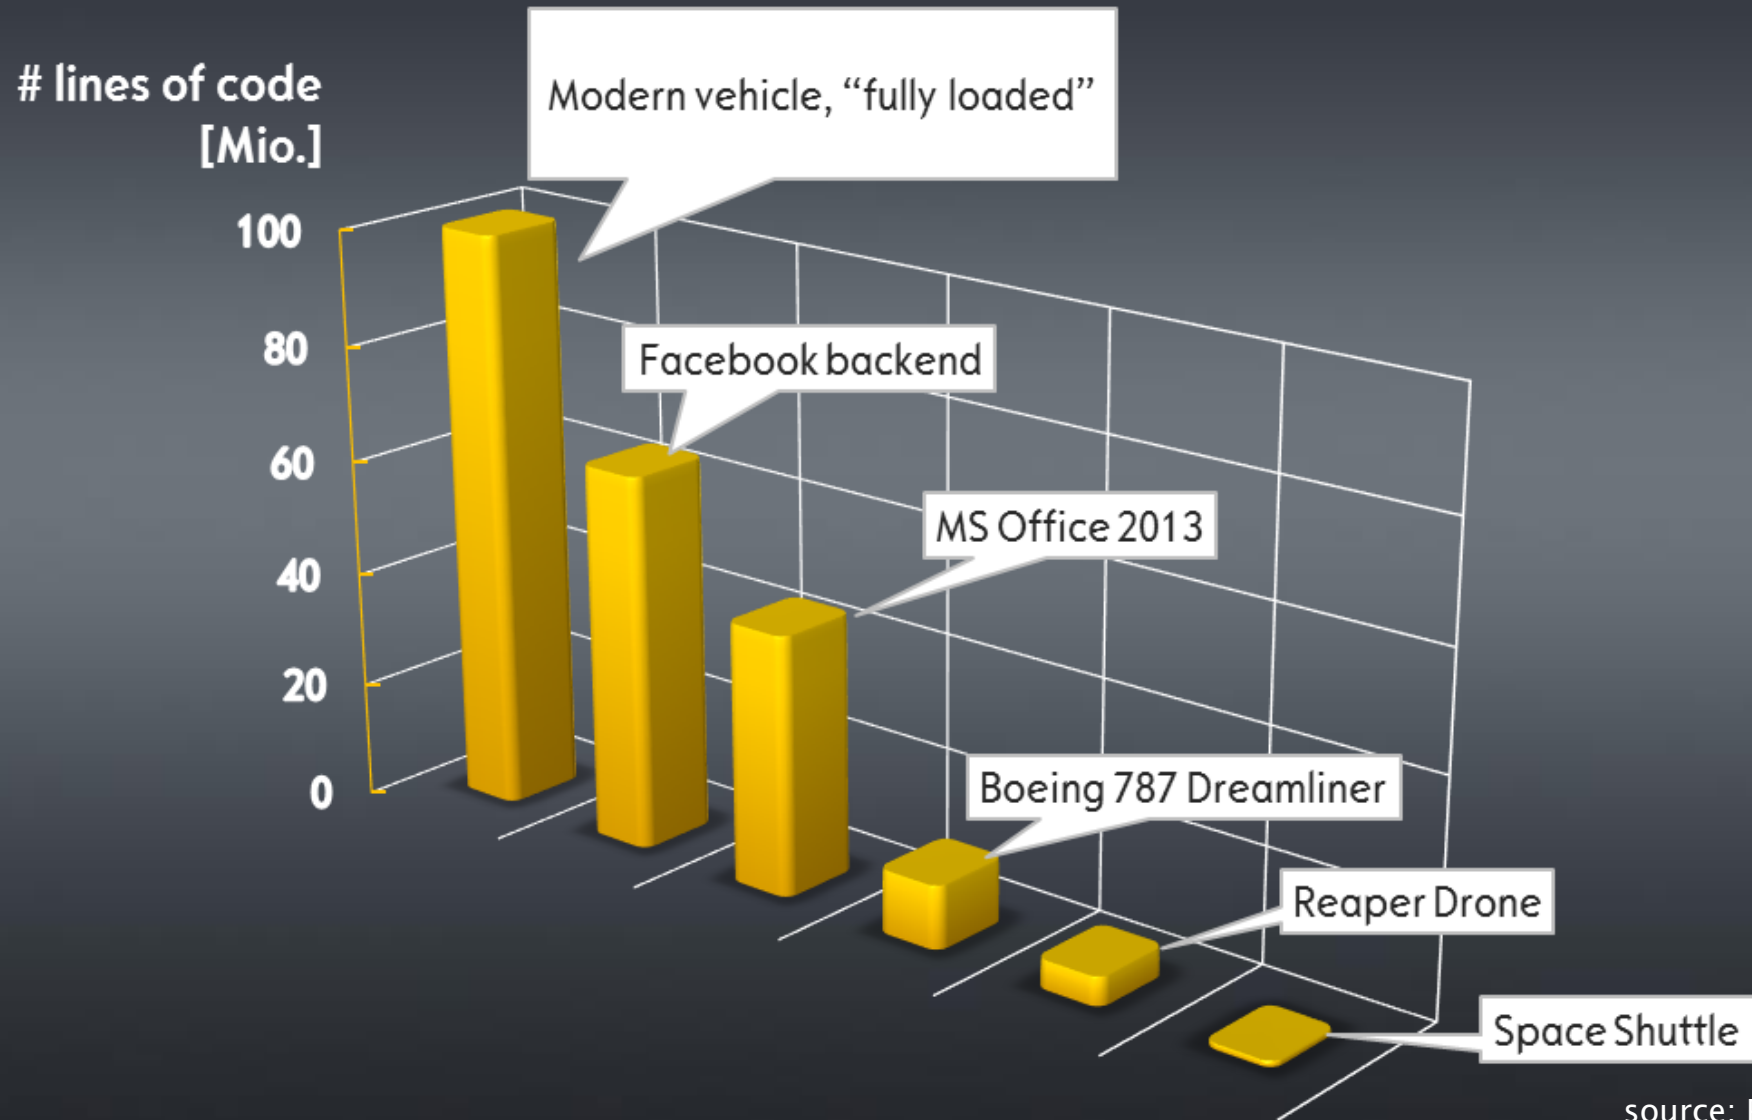

Cooley/Yorukoglu (2003)

*Scholz/comScore (2011) – 25% market share sales

Continuous Automation (SAE)

Level	Name	Narrative definition	Execution of steering and acceleration/ deceleration	Monitoring of driving environment	Fallback performance of <i>dynamic driving task</i>	System capability (<i>driving modes</i>)	BASt level	NHTSA level
Human driver monitors the driving environment								
0	No Automation	the full-time performance by the <i>human driver</i> of all aspects of the <i>dynamic driving task</i> , even when enhanced by warning or intervention systems	Human driver	Human driver	Human driver	n/a	Driver only	0
1	Driver Assistance	the <i>driving mode</i> -specific execution by a driver assistance system of either steering or acceleration/deceleration using information about the driving environment and with the expectation that the <i>human driver</i> perform all remaining aspects of the <i>dynamic driving task</i>	Human driver and system	Human driver	Human driver	Some driving modes	Assisted	1
2	Partial Automation	the <i>driving mode</i> -specific execution by one or more driver assistance systems of both steering and acceleration/deceleration using information about the driving environment and with the expectation that the <i>human driver</i> perform all remaining aspects of the <i>dynamic driving task</i>	System	Human driver	Human driver	Some driving modes	Partially automated	2
Automated driving system ("system") monitors the driving environment								
3	Conditional Automation	the <i>driving mode</i> -specific performance by an <i>automated driving system</i> of all aspects of the <i>dynamic driving task</i> with the expectation that the <i>human driver</i> will respond appropriately to a <i>request to intervene</i>	System	System	Human driver	Some driving modes	Highly automated	3
4	High Automation	the <i>driving mode</i> -specific performance by an <i>automated driving system</i> of all aspects of the <i>dynamic driving task</i> , even if a <i>human driver</i> does not respond appropriately to a <i>request to intervene</i>	System	System	System	Some driving modes	Fully automated	3/4
5	Full Automation	the full-time performance by an <i>automated driving system</i> of all aspects of the <i>dynamic driving task</i> under all roadway and environmental conditions that can be managed by a <i>human driver</i>	System	System	System	All driving modes

Traffic Safety in Germany

Quo Vadis?

Traditional active- and passive safety systems are approaching their limits.

A technology step is required

Post Crash Safety through Connectivity (Opel OnStar)

Over 1 billion customer interactions worldwide in over 20 years

Europe (08/15 – 10/16)

- 1.5 million Interactions
- 25.296 Red button presses
- 214 Automatic crash responses
- 15 Stolen Vehicle Assistance requests
- Every other Opel/Vauxhall is equipped with OnStar

Globally (since 1997)

- >1 billion Interactions
- 5.5 million emergency services delivered
- 29.000 Stolen Vehicle Assistance requests
