

Public Safety Communication Europe Forum

Industrial Committee

Brussels May 18th , 2016
www.psc-europe.eu

Topics

- Chairman election
- Broadmap project and the industrial committee
- Horizon 2020 work program 2017/2018 – input for EC

Broadmap project and the industrial committee

- The results of Broadmap are very important
- Target date 2025 is much too late and nobody knows today what technology we will have in 2025
- Concerns about the process
 - Process seems to be intransparent
 - Selection criteria for PoCs in PCP is not clear
 - IPR issues
 - Role of 3GPP
 - In general PCP is a good idea but the way the PPI is not clear and should be explained and discussed in more detail.
 - Different TRL for solutions, some requirements may be realised immediately some later – several parallel development and research streams needed?
- Other questions:
 - Will there be only one service provider for Europe?
 - Who will purchase the solution?
- Proposal: Workshop with EC and practitioners, research and industry to explain the process and discuss the concerns

Horizon 2020 work program 2017/2018

- From Oxford meeting:
 - Internet of things through sensors and wearables for the PPDR sector (Research project)
 - Data protection in security & technology for PPDR organisations (Coordination and support action)
 - Procedure for the validation of apps for PPDR users (authentication, interoperability) (Coordination and support action)
- New Topics
 - transform data into information
e.g. Predictive policing, border security, infrastructure protection (real-time sensor and video information and analysis for PPDR)
 - Acceptance of new potentials of technologies cross agencies / governments (CSA)
 - Fast track standards for PPDR (CSA)
